Bottle
HPLC Mobile Phase
PP Screw Cap, USP

Manufactured from the material of choice for solvent bottles- borosilicate 3.3 glass. This material has an exceptional chemical durability offering a very low inorganic ion extractable profile, and the total absence of any organic extractable.

HPLC Solvent Recovery Bottles comes with GL 45 Caps. Bottles have conical cavity base for inlet filter to recover HPLC mobile phases & solvents.

Conical cavity bottom allows a maximum recovery of solvent without manually tilting the bottle, thereby reducing the risk of spillage of solvent.

A safe & more convenient alternative to flat bottom glass media bottles. The larger capacity bottles especially useful during weekend or when large chromatographic analysis is required to carried out.

Manufactured from 33 expansion, low extractable borosilicate glass conforming to USP Type I, Class A requirements

- Chemically inert glass prevents leaching of any extractable into the mobile phase solvents.
- Conical bottom delivers all of solvent without reservoir tilting.
- Supplied with GL-45 screw thread.
- GL 45 thread fits standard HPLC connection caps.
- Retrace Code, and certificate for manufacturing lot traceability.
- The central cavity can accommodate magnetic stir bars for improved mixing. In higher capacity bottles
- Side vent / drain hole in the base for ultrasonic bath degassing, or water drainage after cleaning.
- Durable white enamel volume graduations (Approximate volumes)
- Autoclavable at 121°C.

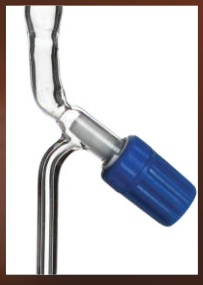
We have brought a new innovation to our volumetric glassware range in which we are offering QR CODED labelled products from which you can scan and download all the certificates

PTFE stopcocks have identical keys, hence matching the pairs is not require after cleaning.

PTFE is self lubricating, hence Key, do not require greasing.

Glass stopcock are perfectly ground, hence no leakage occur.

Specially designed solid glass stopcocks are manufactured from 3.3 Low expansion borosilicate glass.



Rotaflow stopcocks have PTFE keys which do not require greasing.

The PTFE keys provide best drop control during titration process.

Due to identical shape of PTFE key it Burette valve can be closed with gentle turn.

The suspension of solid and liquid is then poured through the funnel. The solid particles are too large to pass through the filter paper (Cat. No. 2063750) and are left on the paper, while the much smaller liquid molecules pass through the paper to a vessel positioned below the funnel, producing a filtrate.

Advantages of Borosilicate Glass

- It expands very small as that of regular glass when exposed to heat, making it better resistant to thermal shocks.
- It is much harder and stronger than normal glass.
- It is much more malleable than regular glass, allowing you to make more complex shapes.
- It has better chemical resistance than ordinary glass.

We all know glass is quite fragile and can break easily.
Interestingly, the cracks of glass move at an incredible speed of about 5000 kilometers/hour. Compared to that speed of sound in dry air is about just 767 miles/hour.
